

[Document Name] Abstract

[Abstract]

[Object] To provide an acid oil-in-water type emulsion composition which is excellent in shelf stability at low temperatures though containing DAG at a high concentration, also good in appearance and flavor and useful as a diet or food improving lipid metabolism.

[Means for Solution] An acid oil-in-water type emulsion composition comprising an oil phase containing at least 20 % by weight of diacylglycerol and 0.5 to 5.0 % by weight of a crystallization inhibitor.
